H. A. Rey's passion for astronomy evident on every page. New updates concentrate on the planetary and solar system information in the latter part of the book. Facts and figures for each planet have been revised, and new scientific information has been added, such as Pluto's reclassification as a dwarf planet. There's also a brand-new online resource that allows readers to track the positions of the planets in the night sky till the year 2100. "An excellent introduction to the heavens, to satisfy and stimulate a child's interest—a very useful book." Kirkus Reviews "Persuades the reader that astronomy is not only easy—it's fun." Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope

While aimed at Northern hemisphere residents, many tips, tricks, and techniques are relevant even under entirely different skies than those he mentions throughout the book. About the Expert Ryan Thomas Kirby has served as an educator for half a decade and has received numerous academics and leadership awards during his academic career. Ryan has had experience as a teaching assistant for astronomy courses, an observatory assistant, a supplemental instructor for astronomy courses at a community college, and an educator in numerous other positions. His experience educating in the field of astronomy is rivaled by his experience researching the field. Notably, he has used T.H.E.M.I.S. data from the surface of Mars to investigate the ages of ancient lava flows and imaged densely packed star clusters to learn about their ages, along with other research contributions. Ryan continues to educate others on

astronomy topics and continues to contribute to research in the field with plans to further narrow his research in a search for moons around extrasolar planets as he progresses his academic career. Ryan is an alumnus of both Bristol Community College and Wheaton College in Massachusetts. He studied astronomy and physics and has held various leadership and educational positions at both colleges during his tenure. HowExpert publishes quick 'how to' guides on all topics from A to Z by everyday experts.
