Deepwater drilling, or Deep well drilling, is the process of creating holes by drilling rig for oil mining in deep sea. There are approximately 3400 deepwater wells in the Gulf of Mexico with depths greater than 150 meters. It has not been technologically and economically feasible for many years, but with rising oil prices, more companies are investing in this area.

Deepwater drilling is a mechanical process where a deep wellbore is drilled to a depth greater than 300m. Only recently has the technology existed to enable economically feasible deep-water exploration, but with better technical development and increased demand for oil exploration, operators have recently invested in deep sea projects to access deposits buried very deep under the sea floor.
