Overview of Fluid and Electrolyte Physiology (Fluid Compartment) [Fluid Balance Charts](#)

A fluid balance chart is used to document a patient ' s fluid input and output within a 24-hour period. This information is used to inform clinical decisions (such as medication and surgical interventions) from medical staff, nurses and dieticians, who all expect accurate figures in exact measurements (Georgiades 2016).

Fluid Balance is a newly added skill in NMC OSCE from July 19 2019. Fluid Volume chart is used to find the cumulative volume of fluid in and out of the concerned patient. The result can be a positive balance or a negative balance. You need to escalate the care accordingly. This article includes a fluid volume calculation skill scenario with tips to pass the skill easily.
